

GLOBAL TASK FORCE ON
CHOLERA CONTROL

WASH WG NEXT STEPS

ASK TO THE WASH WG

Need common approach/recommendation on what is:

- Basic water
- Basic sanitation
- Some level of water quality

If we can get recommendation from WASH WG on what to promote then we can align investment case for cholera and advocacy efforts towards HLPF

ADVOCACY – RESOURCE MOBILIZATION

Additional WG

Recommendation to formalize a WG ON 1) advocacy/resource mobilization/partnership and on 2) community engagement

Advocacy – SDG

Need to formalize engagement and linkages with SDG – HLPF and opportunities to target countries – i.e. letters to countries, SWA...

Investment case

INDICATORS FIRST IDENTIFY THE HOTSPOTS

	Indicator	Targets	Additions	Comments
Sanitary inspection			Include pit latrines	
Water	SDG Basic + Use ladder approach	Priority hotspots or high risk areas Target 100%?	Add Free Residual Chlorine (if applicable) or other water quality Household water treatment Safe storage	Accelerate in relation to other non hotspot areas e.g. by 2025 instead of 2030
Sanitation	SDG Basic Use ladder approach	Priority hotspots or high risk areas Target 80%?	No reuse of waste water or sludge in hotspot areas or	
Hygiene	SDG Basic	Priority hotspots	Food safety/street vendors	
WASH in healthcare		Priority hotspots		

INDICATORS - ADDITIONAL DISCUSSION POINTS

Alignment important for cross border hotspots

Importance of coordination between sectors and having an indicator for this

Using health indicators to measure WASH – no cases (but this is not enough)

Potential of using other indicators in fragile states

What is the messaging?

No open defecation

OPERATIONALISING THE ROADMAP

Feedback:

- Expertise research, communication – evidence available to show what will contribute to control cholera
- National policy – informal settlements, peri urban areas: define status
- Foster South/South connections
- LEARNING BY DOING

Remaining questions

What role for the GTFCC as a coordination mechanism?

Models for public private partnership?

More work to be done – come with proposals (lessons learnt)

GTFCC COORDINATION

Next WASH WG meeting – 3 days?

Linkages with Other WG

- OCV WASH coordination – implementation, evaluation
- Strengthening link Epidemiology/RRT to measure impact
- Call for countries and partners to engage on GTFCC work on surveillance and availability to participate in the surveillance WG

Thank you

**Together we can
#endcholera**
