

GLOBAL TASK FORCE ON

CHOLERA CONTROL ROADMAP

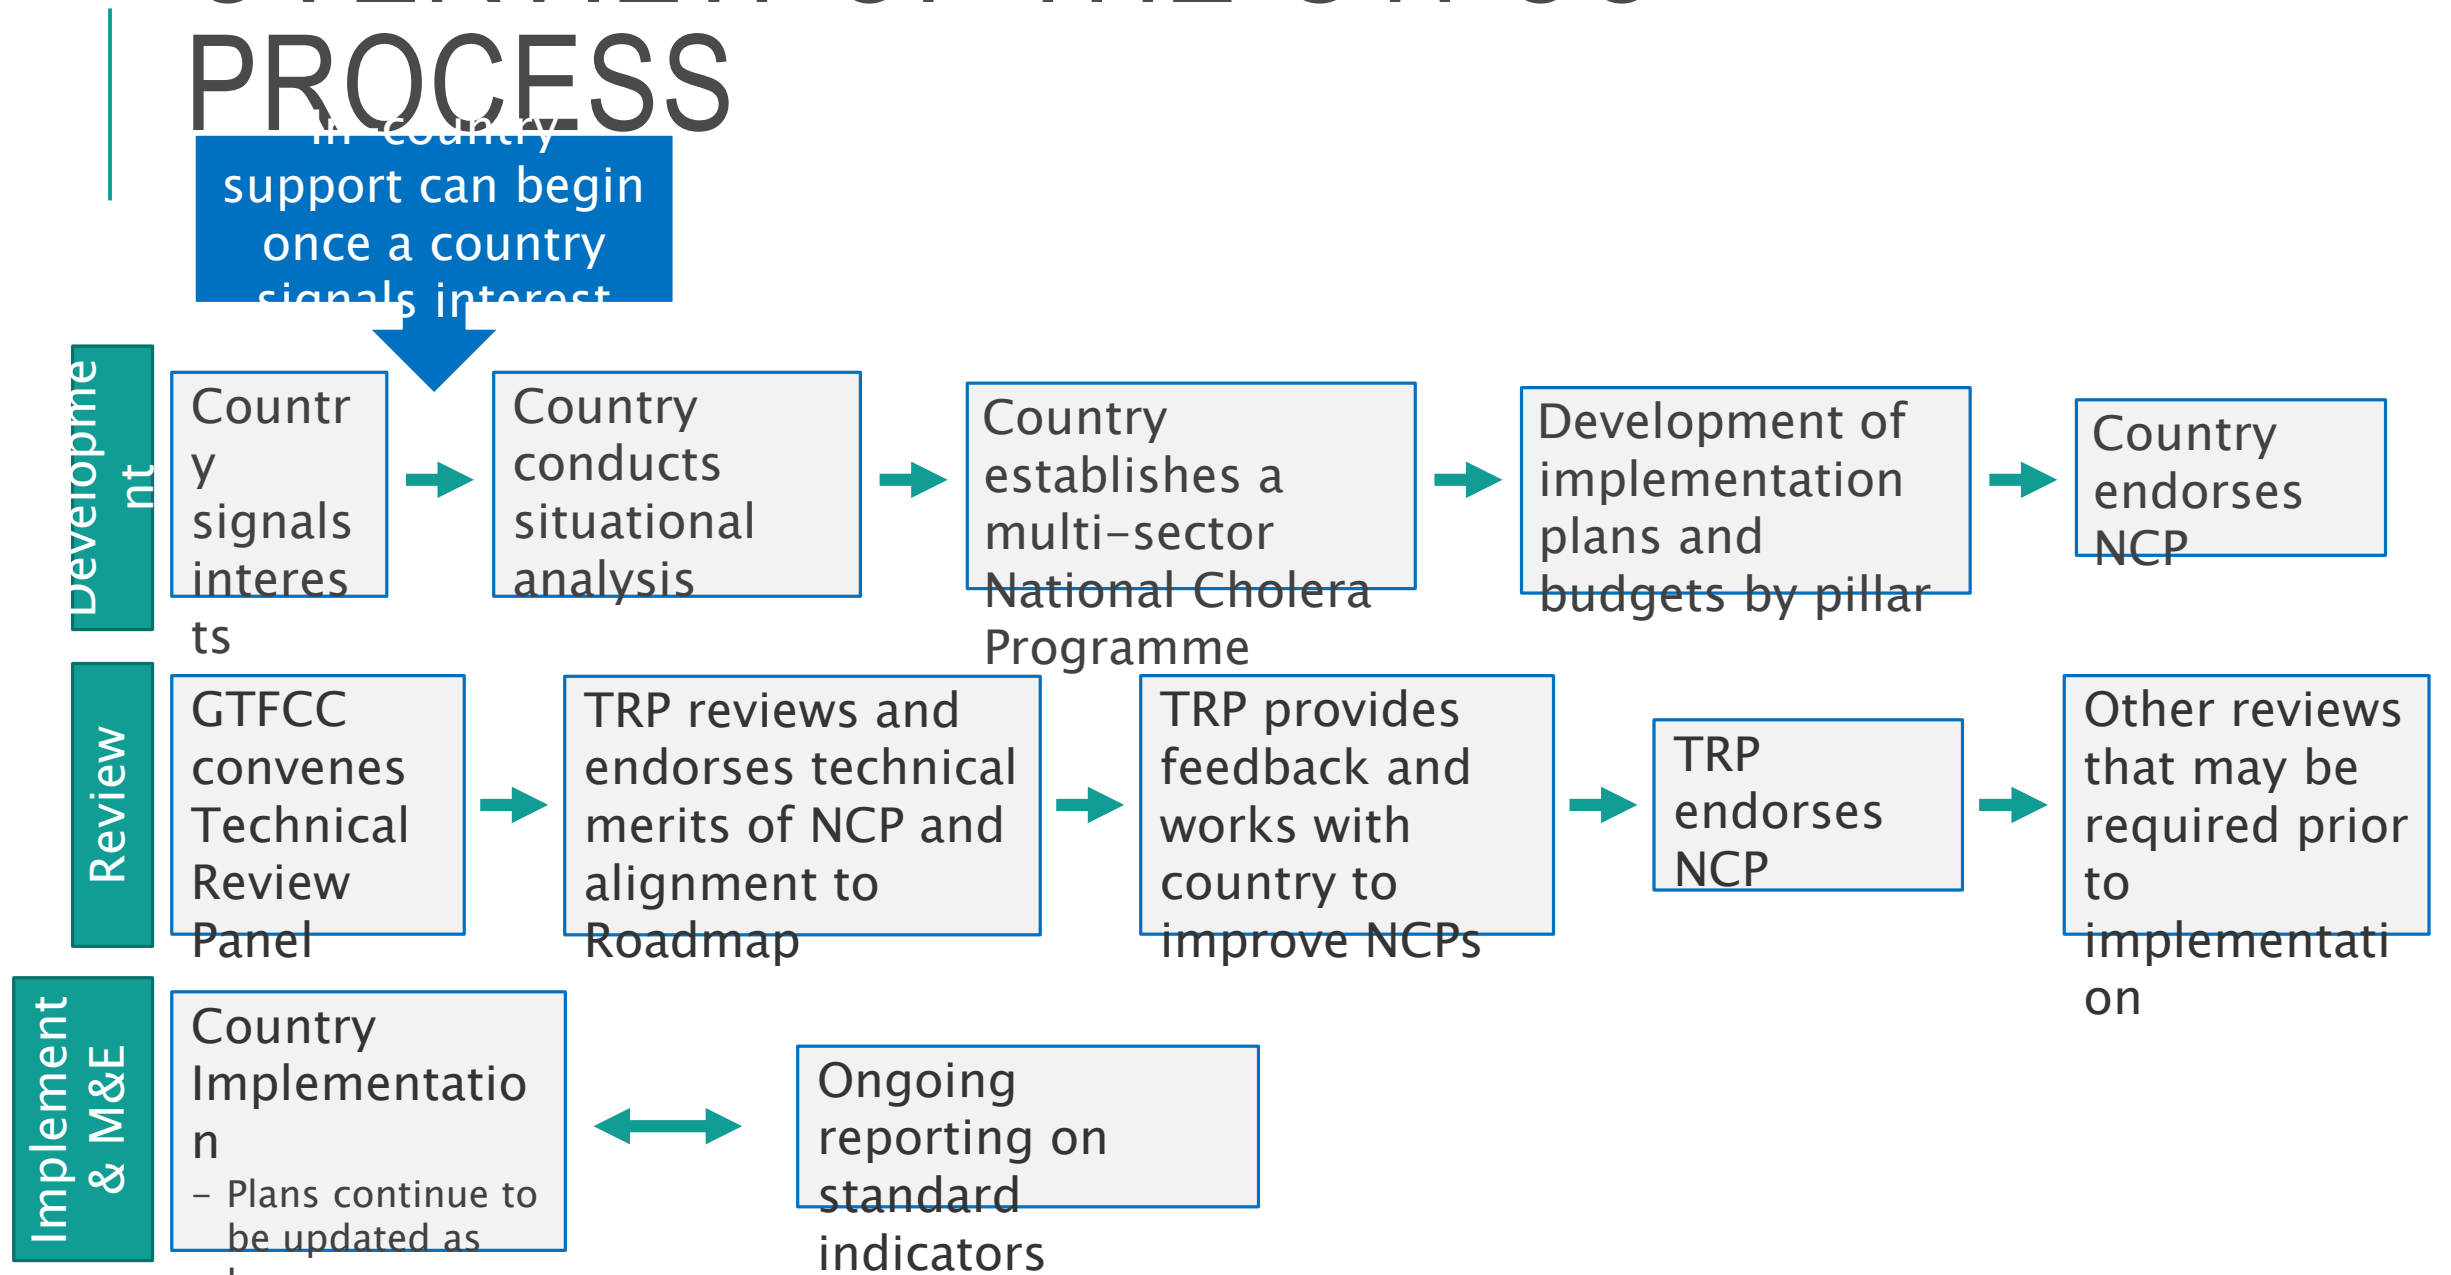

IMPLEMENTATION PROCESSES AND GUIDANCE

Melissa Ko, MMGH
5 December 2018

ROADMAP IMPLEMENTATION REQUIRES DEVELOPING PROCESSES TO ACCESS SUPPORT AND COUNTRY GUIDANCE

- Key objective is to encourage multi-sectoral implementation, provide countries with guidance on NCPs, and ensure strong monitoring of national cholera programmes
- Two workstreams will be undertaken to focus on developing the:
 - Process to receive, review, and endorse NCPs
 - Practical guidance to countries and partners on NCP development, implementation, and monitoring

OVERVIEW OF THE GTFCC PROCESS

TIMELINES AND CONSULTATION

- A sub-set of individuals from each WG, including partners and countries, will be asked to provide detailed feedback
- High level consultation with each GTFCC WGs via email or annual meetings
- Institutional buy-in to be collected and finalized in May 2019
- All documents will be finalized at the annual June 2019 meeting via GTFCC validation with planned dissemination by early July 2019

GLOBAL TASK FORCE ON
CHOLERA CONTROL

THANK YOU

NCP DEVELOPMENT AND REVIEW PROCESS DESIGN

- Process design will focus on the following:
 - Defining how countries can **signal interest** in Roadmap implementation
 - Developing a **menu of Technical Support** from GTFCC partners available to countries (to be discussed in afternoon session)
 - Developing TORs and forming an **GTFCC Technical Review Panel (TRP)** to review and endorse NCPs
 - Developing **review criteria** for the TRP to review NCPs
 - **Identifying linkages to avoid duplication** and ensure processes are aligned with other governance processes from other bi-lateral support / funding entities

COUNTRY GUIDANCE ON NCP DEVELOPMENT

- Key sections of NCP
 - Setting **country specific goals** and objectives aligned with Roadmap
 - Establishing a **national cholera programme** (including sample TORs)
 - Conducting a **situational analysis**
 - Epidemiological analysis
 - Pillar analysis (surveillance, CM, OCV, WASH, Community Engagement, and Coordination)
 - Developing implementation **plans** and **budgets**
 - Links to ongoing and future work of GTFCC's WGs and partners
 - Identifying **standard M&E indicators** for reporting /

KEY PRINCIPLES OF GTFCC PROCESS TO SUPPORT COUNTRIES

- The development, implementation, and monitoring of National Cholera Plans for Control / Elimination (NCPs) must be **country led and context specific**
- The GTFCC will support countries via 2 workstreams:
 - WGs: Development of technical Guidance / Policy (e.g., Interim guidance on surveillance, Technical notes, revision of OCV position paper)
 - GTFCC partners: Long term support for country implementation and monitoring

WHAT DOES THE OCV SECTION LOOK LIKE?

SITUATIONAL ANALYSIS

- Aims to answer the question of what is the country's current capacity to conduct OCV campaigns?
 - Has the country conducted previous mass vaccination campaigns, including an evaluation of (i) existing supply/cold chain systems, logistics; (ii) coverage achieved; (iii) acceptability; (iv) costs
 - What financial resources currently exist to conduct future campaigns?
 - Other questions that are covered in other pillars but related to OCV, some examples below
 - Who are the key implementing partners → Coordination
 - What are key social mobilisation activities needed to be undertaken prior to conducting OCV campaign → Community Engagement

WHAT DOES THE OCV SECTION LOOK LIKE?

PLANNING AND IMPLEMENTATION

- For each pillar, the framework identifies common gaps and sample objectives and actions to be undertaken
- Based on the situational analysis, OCV section focuses on development of:
 - Hotspot vaccination plan with prioritization and specific timelines
 - Contingency plans to prepare for emergency vaccination
 - Microplanning with clear roles and responsibilities identified of MOH stakeholders and key partners
 - Detailed budgets
 - M&E plans for before, during, and post-campaign
