Adaptive Social Listening to Inform Effective Vaccine Public Engagement Strategies

Joe Smyser, PhD, MSPH
Chief Executive Officer
PGP (Public Good Projects)
Don’t worry,

This is not a dashboard.
MISSION
- The Vaccination Demand Observatory is a multi-stakeholder global initiative to identify, track, and respond to vaccine hesitancy and misinformation.

VISION
- A sustainable global network of infodemiologists supporting national immunization programs through equitable social listening and partner coordination, actively informing demand generation, misinformation management, vaccine hesitancy & new vaccine introduction.
UNICEF has partnered with global leaders in social listening, misinformation and vaccine demand.

UNICEF manages immunization programs in over 100 countries and is historically the world’s largest single purchaser of vaccines. Headquartered in New York City, UNICEF has offices in over 190 countries and territories, with 85% of staff based in the field. UNICEF country offices work closely with government health agencies, and have deep roots into communities and networks of community based organizations.

UNICEF has communications, behavior change specialists and community-level teams in 190 countries and territories.

A US-based public health nonprofit. PGP specializes in large-scale media monitoring programs, behavioral health interventions, & cross-sector initiatives.

PGP runs the United States’ largest vaccine misinformation monitoring system, Project VCTR, used by 500 organizations including US and Canadian government agencies.

The Director of the YIGH, Dr Saad B. Omer, is a leading researcher on vaccine demand. His team has identified key socio-behavioral drivers of vaccine acceptance & have tested behavior-grounded interventions to increase immunization coverage & acceptance.
3 pillars of the VDO

Social Listening & Analytics
- Customizable social listening platform, analytical tools & technical support to enable countries to track & analyze vaccination conversations in digital space and real world.

Country Implementation

Field Infodemiologist Training Program
- Build country capabilities, with focus on developing field infodemic managers.

Vaccine Acceptance Interventions Lab
- Design and rapid test messages and narratives for efficacy and safety.
Social Listening
Vaccine Demand Observatory
Social Listening System

Incorporating online and offline data, UN, public media, country, and research data will create a novel system built to identify opportunities in real time.

Making sense of big data.

Identifying and exploring conversations and communities.

System is customizable for each country.

System is built for real-world programmatic needs.
Field Infodemiologist Training Program
Infodemiologist Fellows will reside in their home organization, or can be hosted by country UNICEF offices. For example, if an Infodemiologist Fellow works within government they can participate in the program while maintaining their current government position.
Field Infodemiology Training Program

WHO 2020 Infodemiology conference identified need to develop a competencies framework for an infodemiology skillset and develop online training tools.

Introductory module

Blended/Active learning package providing an overview on the typology and strategic intent of misinformation

Delivered via mobile phone & online courses with practical hints and resources

Becoming an Infodemiologist

An advanced module that addresses the competencies framework & skillset of the role with general & vaccine-specific misinformation case studies and country specific data

Delivered via training needs assessment, mobile phone & online courses with practical hints and tips, how-to videos and scenario planning

Community of Practice

Facilitating a forum between peers to assess how their knowledge is being implemented in their daily work, best practices, trouble shooting and working through any questions or queries

Toolkit

A directory of the wealth of resources to assist the infodemiologists and other teams to identify and avoid promoting misinformation.

The Misinformation Management Field Guide will be continuously updated with the latest case studies and best practices based on the latest research.
Each regional office and targeted country offices will be responsible for managing monitoring, intervention decisions and message deployment.

Evidence-Grounded Guide for Developing Strategic National Action Plans

Part 1: Vaccination in the information age
- Vaccine Hesitancy
- Infodemics, misinformation and disinformation
- Why are people susceptible to misinformation?
- Misinformation is sticky
- 3 reasons why people create vaccine disinformation
- Don’t be distracted by disinformation

Part 2: Misinformation management
- Preparation Phase
- Listen Phase
- Understand Phase
- Engage Phase
- Appendices: case studies, tips, examples, metrics.

Operational framework which ensures:
- Online and offline social listening
- Close coupling of social listening with engagement actions
- Evaluation of impact

Available in English, French, Spanish, Arabic, Portugese & Italian

Vaccination Demand Observatory ongoing work:
Polio in West Africa

Vaccination Demand Observatory partners are currently working together with the UNICEF polio team to support polio vaccine introduction in Africa through misinformation management; soon to expand scope to COVAX

Liberia  Congo Brazzaville  Burkina Faso  Côte d’Ivoire
And yeah, a dashboard.
Global Dashboard

This beta dashboard centralizes global-level insights, misinformation alerts, fact checks, and the latest resources published by The Observatory. Insights are updated weekly on Friday and reflect data from the prior week. Explore sample data by selecting the data dashboard tab in the navigation bar above. Visit the About page for more information.

Weekly Insights

Viewing the most recent week. Next update: Fri, Apr 16

Broad conversational themes across channels and geographies. Updated each Friday to reflect data from the prior week.

Alleged Bombshell From Moderna Chief Medical Officer Is Recycled By Anti-Vaccine Groups.

- The debunked claim that the mRNA COVID-19 vaccines will alter the human genome continue to circulate in groups critical of vaccines around the globe. An article that circulated in Facebook groups in countries such as Australia, Canada, Germany, India, Poland, and other countries, recycled the false claim that Dr. Tal Zaks, Moderna’s Chief Medical Officer, admitted that mRNA alters DNA in a 2017 Ted Talk in which Dr. Zaks makes the case for mRNA vaccines as a method able to generate stronger immune.

Misinformation Alerts

Recommended responses to emerging content.

- Discredited claims COVID-19 created in a lab resurface
  Recommendation: Ignore
  Focus on current communications priorities.
  More details +

- AstraZeneca COVID-19 vaccine's link to blood clots causes worldwide concern
  Recommendation: Passive Response
  Be prepared to address if directly asked directly or in certain cases like FAQ’s and info sheets.
