- **Mérieux Foundation (FMx) Fellowships:**

Limited number of 10 fellowships provided by FMx, covering registration, travel expenses, accommodation and meals based on the course program – only available for participants from low-and middle-income countries.

ABOUT THE COURSE

After the success of the 4th editions of the Antimicrobial Resistance Course (AMR) – A One Health Challenge, that took place in 2019, 2021, 2022 and 2023, the 5th edition of the AMR course will take place from November 11-15, 2024 at Les Pensières Center for Global Health in Veyrier du Lac, France.

Antimicrobial resistance (AMR) is a growing global public health menace that threatens the prevention and treatment of bacterial diseases. The AMR-Global Action Plan (GAP) by WHO (World Health Organization) and One Health global strategy consider fostering awareness and understanding on antimicrobial resistance to be a priority and essential for the adoption, deployment and implementation of country AMR-National Action Plans (AMR-NAPs). To support this critical effort, the Mériéux Foundation and Université Paris Cité have joined their expertise and capacities to support the AMR-GAP by designing a course to address concretely -from plan to action- the five objectives of the AMR-WHO-GAP. Together, the Mériéux Foundation and Université Paris Cité propose a residential intensive training course on AMR in a One Health perspective, principally targeting audiences from low- and middle-income countries.

The course advocates for the value of the One Health approach to fight against AMR and builds capacity for critical decision-making in low-and middle-income countries through education, partnerships and networks.

The program is based on the five WHO-AMR-GAP objectives (one objective per day):

Day 1

The role of antibiotics and the current challenges – improving awareness and understanding of antimicrobial resistance

Day 2

Strengthening knowledge and evidence through monitoring & surveillance

Day 3

Interventions to tackle AMR

Day 4

Optimizing the use of antimicrobial medicines in human and animal health

Day 5

Social Sciences, Regulation and the Economic Case for global sustainable investment to tackle AMR
